E (keV)	%	E (keV, Ave)	%	E (keV)	%																														
412	96	315	99																																
71	1	328*	3																																
		79	1																																
- Only 4 most probable emissions per decay type included. Emissions below 10 keV or 1% excluded.																																			
<b>STANFORD HAZARD CATEGORY</b> C – level (low hazard): $\leq 20$ mCi B – level (moderate hazard): $> 20$ mCi, $\leq 1$ Ci A – level (high hazard): $> 1$ Ci																																			
<b>EXTERNAL RADIATION HAZARDS</b> Gamma dose rate, point source at 1 ft, 1 mCi: <b>2.29 mrem/h</b> <hr/> Beta dose rate to skin, point source at 1 ft, 1 mCi: <b>460 mrem/h</b> <hr/> Contamination skin dose, uniform deposit of 1 $\mu$ Ci per cm <sup>2</sup> : <b>6200 mrem/h</b>			<b>INTERNAL RADIATION HAZARDS</b> Annual Limit on Intake: <b>1000 <math>\mu</math>Ci</b> (Ingestion) <b>2000 <math>\mu</math>Ci</b> (Inhalation)  The values above indicate the activity taken into the body that would result in either 5 rem to the whole body (CEDE) or 50 rem to an organ or tissue (CDE).																																
<b>SHIELDING</b> <b>Gammas/X-rays:</b> <b>10.5 mm</b> of lead will reduce the gamma dose rate by 90%.  <b>Betas/electrons:</b> <b>3 mm</b> of plastic will absorb all emissions. Bremsstrahlung may be created and require additional shielding.			<b>DOSIMETRY AND BIOASSAY REQS</b> Whole-body and finger-ring dosimeters are required for handling <b>5 mCi</b> or more, or <b>1 mCi amounts weekly</b> . Urine assays may be required after large spills or contaminations.																																
<b>SPECIAL PROBLEMS AND PRECAUTIONS:</b> <ol style="list-style-type: none"> <li>1. Recommended survey probe: <b>PGM</b></li> <li>2. Always wear protective gloves, a lab coat, and safety eyewear to protect the skin and eyes from contamination. Change gloves often.</li> <li>3. Survey work areas before, during, and after work. Work areas may require shielding to keep dose ALARA. Instrument and smear surveys are required.</li> <li>4. Segregate waste to those with half-lives between <b>1 and 8 days</b>. Survey the waste disposal area to ensure exposure rates are less than 2 mR/hr at 1 foot.</li> <li>5. Limit soluble waste to the sewer to less than <b>100 <math>\mu</math>Ci/day</b> per lab.</li> </ol>
